

SOLMU-910 DAQ Module

by Solmu Technologies

DESCRIPTION

The Solmu-910 DAQ is a 3-channel data acquisition (DAQ) module for making high-accuracy measurements. The measurement setup can include a single DAQ module or a group of wirelessly synchronized modules. Wireless synchronization enables fast long range measurement setups.

KEY FEATURES

- Easy to use
- 32-bit resolution
- 5 kHz sampling rate
- 90 dB dynamic range
- 3 analog input channels
- Large memory for measurement data
- Long range synchronized wireless multi-module measurement setups
- Measurement duration up to 8 hours
- Rechargeable 3.7V 18650 lithium-ion battery
- Real-time spectrum analysis
